CDM-710G High-Speed Satellite Modem

INTRODUCTION

The CDM-710G High-Speed Satellite Modem provides transmission of data using the same powerful DVB-S2¹ techniques developed for video delivery in Digital Video Broadcast (DVB) applications. It operates over satellite links with programmable symbol / data rates up to 45 Msps.

The modulation types supported include DVB-S2 QPSK, 8-PSK, 16-APSK and 32-APSK. Constant Coding and Modulation (CCM) operation with a single input stream is provided for operation. The unit is available in modulator only, demodulator only, and modem configurations.

The terrestrial data interfaces are field-removable to allow swap out of interface types. The data interfaces include the CDI-10-1 with G.703 E3/T3/STS-1, CDI-60 HSSI and CDI-70 Gigabit Ethernet.

DVB-S2 offers new opportunities for data transmission

applications. With a broad range of modulation and coding formats, it permits the user to tailor a link for

the available bandwidth and power to optimize link performance. Whether a link is point-to-point or point-tomultipoint there is a format available to suit each application. The CDM-710G is designed for generic (non-MPEG2 format) data applications

APPLICATIONS

The CDM-710G's bandwidth and power-efficient operation is ideal for:

- Transmission of non-transport stream data
- Referred to as Generic Data in DVB-S2
- Business enterprise data distribution
- Broadband Interactive and Internet services
- Any networking application relying on
 - Point-to-point transmission
 - Point-to-multipoint transmission
 - Arbitrary topology

With a Gigabit data interface and either a 70/140 MHz or L-Band IF, the CDM-710G is equipped with the

¹ ID Number 3424 for CDM-710G DVB and DVB-S2 logos are trademarks of the DVB Digital Video Broadcasting Project (1991 to 1996). configuration most frequently requested by users. This is ideal for data transmission formats that take advantage of the Ethernet packets for digital one-way, two-way and any network applications. The HSSI interface enables IP or other data formats via a serial interface, and telecom applications are supported with the G.703 interface.

FAST

Enhancing the CDM-710G's performance is easy. Additional features are added quickly on site, using FAST access codes purchased from Comtech EF Data. To enable these features, simply enter the code at the front panel. Other features are added with a simple module swap.
