

Livestream Broadcaster

The **Livestream Broadcaster** from **Livestream** encodes video and audio signals from cameras and switchers and streams them to the web without connection to a computer, streaming via Livestream's "New Livestream" service. Video is encoded in the commonly accepted H.264 format and audio in the common AAC format, both in real-time at up to 2.3 Mbps. The two signals are input by HDMI and via a 3.5mm audio jack, respectively.

The Encoder features a blue OLED display, a button, a joystick control, and four blue status indicators. Wireless WiFi is built in and an Ethernet port is available. Power is by a DC adapter or by AA batteries, both included.

Broadcast Live to any Device

The Livestream Broadcaster is an HD live broadcasting device that works seamlessly with the "New Livestream" service to deliver the industry's first affordable unlimited ad-free HD live streaming end-to-end solution.

HD Minus the PC

Event owners and producers can use the Livestream Broadcaster as a desktop encoder connected to a multi-camera video production switcher or as a battery powered portable wireless encoder mounted to a camera and streaming via Wi-Fi or a USB 3G/4G wireless modem.

Remote Control

Control the Livestream Broadcaster on the device itself or remotely from anywhere in the world via the Livestream website, or via the "Livestream for Producers" iPhone app.

High Quality HD Video

Cameras connect to the Broadcaster via the HDMI video input, supporting HD 1080i, 720p, and SD 480i. Audio is input via a 3.5mm audio jack. The Encoder encodes real-time in high quality H.264 video and AAC audio at up to 2.3 Mbps.
